## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 8/13/07 have been fully considered but they are not persuasive. The Office reasserts that Fishman discloses determining whether the CNC lathe is a one spindle or two spindle lathe. In the Applicant's Remarks, the Applicant correctly states, "since various synchronization modes are graphically displayed for user selection during the creation of the program, it would appear that the type of machining tool is preset in advance at the factory, or later by the user." The Examiner asserts that, when the user selects the synchronous mode (col. 5, lines 20-29; col. 18, lines 27-37), the user is in fact determining the type of machining device, since the synchronous mode is based on the machining device. For example, if the user selects an M1, M2, M3, M4, M5... synchronous mode, the user has determined to use a single spindle machining device (col. 17, lines 53-66). Furthermore, the claim as presently constituted does not specify determining the type of machining device on an automated basis.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Fishman et al. U.S. Patent 6,741,905. Fishman discloses a method for creating a machining program for machining a

Art Unit: 2125

workpiece into a product model, the method comprising: determining a type of machining device controlled by a numeric controller (col. 5, lines 20-29; col. 18, lines 27-37), wherein the type of machining device comprises one of: a two-spindle machine having a first main spindle and a sub-spindle (col. 16, lines 35-44) and a one-spindle machine having a second main spindle (col. 17, lines 53-59); and generating the machining program for the machining of the workpiece into the product model based on the determined type of the machining device, wherein the machining program generated for the two-spindle machine (col. 19, lines 7-15) is different from the machining program generated for the one-spindle machine (col. 18 and 19, lines 64-6).

#### *Allowable Subject Matter*

4. Claims 7-11 are allowed.
5. Claim 13 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

#### *Conclusion*

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 2125

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
